Date: 2/19/2018 - 2/25/2018 Week7

*This week*

1. Finish the GUI part of the task.

2. Learn some base thing abut JavaScript. It is a totally new thing for me. A hard thing.

*Next week*

1. Learning More JavaScript

*Issues*

1. I found a number question when I do my last two and one part in my task. As the picture shows,

```
====== RESTART: C:\Users\Administrator\Desktop\wk06_example_Xiaoqiao.py ======
[0.063, 0.056, 0.067, 0.034, 0.028, 0.125, 0.039, 0.045, 0.04, 0.068, 0.06999999999999999, 0.037000000000000005, 0.041999
999999999996, 0.034, 0.037000000000000005, 0.066, 0.06999999999999999, 0.064, 0.036000000000000004, 0.018000000000000002,
0.077]
```

The eleventh number, it should 0.07. However, I don't know why it becomes 0.0699999999. It also happen on my last two part.

```
['-0.040', '-0.066']
-0.1060000000000001
```

The result should be -0.106. However, I don't know why there is a 0.00000000000001 has been added.

This issue still hasn't been solved.
